BULBS AND STRAWBERRIES

FALL BULBS—1919

WE take pleasure in presenting our ANNUAL BULB CATALOGUE for your early consideration. After the war conditions in Europe the stocks of many Bulbs are depleted but we have assurance from our Holland growers that the Bulbs shipped to us will all be first size and of quality equal to that supplied to us in former years.

We request our patrons to order early as there will undoubtedly be a shortage late in the Fall of first-class bulbs.

We thank our numerous patrons and friends for their continued confidence in our goods, which has enabled us to be proud of their patronage, and we hope to still maintain the standard and quality of our bulbs in the future as in the past.

Our patrons will always find courteous treatment from our fellow-workers who have so greatly aided us in the expansion of our business.

HYACINTHS

POT CULTURE.—Planting may be made at any time from September to December, though October is the best time. A light, rich soil, with a mixture of well-rotted cow or sheep manure, is most suitable. Use a 4- or 5-inch pot, and have the top of the bulb just above the surface. After potting, give a good watering and set away in a cool cellar or outhouse, and cover over with coal-ashes or some litter until thoroughly rooted; they may then be brought as wanted for a succession of flowers into a moderately warm, light room.

CULTURE IN GLASSES.—When it is desired to grow Hyacinths in water, they should be placed so that the base of the bulb merely touches the water. The glasses should then be set in a cool, dark closet, or in the cellar, until filled with roots, when they may be brought into the light. Give as much fresh air as possible without letting the plants stand in a draught and as nearly as possible at a temperature of 60° until the spikes are developed. To put them at once into a room with a temperature of, say 70°, would cause them to flower prematurely.

OUTDOOR CULTURE.—The bulbs may be planted any time from October to December—the earlier the better. They succeed in any good, well-drained garden soil. Set the bulbs so that the tops will be 3 or 4 inches below the surface and 6 to 10 inches apart. Before very severe weather comes on, cover the beds with straw, leaves, or manure, to protect them from the frost, but care should be taken that this covering is not too thick; as the bulbs are as likely to be injured by being kept too warm, as by freezing, this should be removed in March, or when danger from hard frost is past.

Marshall's French Roman Hyacinths

(Ready for Delivery in August)

The flowers are delightfully fragrant, and each bulb will throw up three to four spikes. For forcing, three or four bulbs are generally planted in a pot. The pots must be kept in a cool and dark place until they fill with roots, when the flower spikes can be rapidly developed by exposure to light and moderate heat. They are very easily grown and extremely early; and, by making successive plantings, they may be had in flower all through the Winter.

Planting Table for Beds of Bulbs

A circular bed 6 feet in diameter, with bulbs 6 inches apart, requires 110 bulbs; 5 inches apart, requires 160 bulbs; 4 inches apart, requires 300 bulbs.

Depth at Which Bulbs Should be Planted

Many of our customers are frequently puzzled to know the proper depth and distance apart at which bulbs should be planted. The accompanying diagram, reproduced from **Popular Gardening**, conveys the information much more clearly and briefly than we could describe it. The chart will bear careful study. **Outdoor planting should be done early in the Fall** to secure healthy plants vigorous foliage and beautiful flowers.

Single Narcissus

For import only, orders must be placed before August 1, 1919

Growing Bulbs in Prepared Fiber

The following bulbs may be grown in Prepared fiber: **Hyacinths, Early Tulips, Narcissus, Jonquils, Crocuses, Scillas, Freesias, Snowdrops and Spiræas.** Our prepared Fiber is mixed with Charcoal and only needs to be moistened before use. Bulbs may be grown in vases or bowls as drainage is unnecessary when using fiber.

Marshall's Prepared Fiber. Half peck 30c., peck 50c., bushel \$1.75.

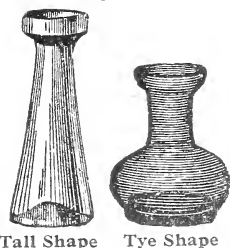

Hyacinth Glasses

Hyacinths can easily be grown in water, and it is rather a novelty to grow them in this way.

We offer the following two kinds of glasses to be used for this purpose:

Tall Shape. In various colors. 25c. each, \$2.50 per doz.

Tye Shape. In various colors. 25c. each, \$2.50 per doz.

The above named Hyacinths, 20c. each, \$2.00 per doz., \$15.00 per 100.

Marshall's Select Second Size Named Hyacinths

These are smaller than our Exhibition Bulbs offered above, but are fine flowering stock, and admirably adapted for pot culture and high-grade bedding where distinct shades of color are desired. We can furnish them in the following grand varieties:

Gertrude. Deep rose; extra fine for bedding, having erect truss.
King of the Blues. Dark blue.
La Grandesse. Pure white.
Perle Brilliant. Light blue.
Roi des Belges. Brilliant crimson scarlet.

Price, any of the above, 15c. each, \$1.50 per doz., \$10.00 per 100.

Miniature Hyacinths

These are also known as **Dutch Romans** and **Pan Hyacinths**. They are small, single-flowering. Dutch Hyacinths, and are very suitable for growing in pans, pots or boxes, using one variety only to each pan, to insure that they are all blooming at the same time. They are also fine for outdoor planting.

TULIPS

Tulips for bedding are the most popular and effective of all hardy, bulbous plants. In our descriptions we give the color and average height to which they grow. For pot culture and forcing for Winter cut flowers they are invaluable.

The cultural directions given for Hyacinths on cover page are equally applicable to Tulips except that the bulbs, being smaller, must not be planted quite so deep. Four inches to the bottom of the bulb is deep enough, and a distance of 5 to 6 inches between the bulbs is sufficient. They may be planted in October and November, before the ground freezes. For pot culture, a compost of two parts loam to one part light manure, with some sand intermixed, is suitable. From three to five bulbs, according to size, in a 5-inch pot, are very effective. The pot should be buried until the bulbs are well rooted in the manner recommended for Hyacinths.

A, B, and C, indicate season for flowering. A and B may be planted to flower about the same time in the open ground; C flowers later. The figures indicate average height in inches.

Marshall's Selected Double Tulips

While not equal to the single in brilliancy, double varieties last much longer in bloom. The early varieties, such as Murillo, Imperator Rubrorum, and the Tournesols, are excellent for forcing. The later sorts will not bear forcing, but are very effective in beds or borders.

Marshall's Matchless Darwin Tulips

The finest class of late-flowering Tulips in existence. Flowers are brilliant, self-colored, borne on strong stems, many of them 2 feet high. The colors surpass in brilliancy anything hitherto known in Tulips, and are of almost every conceivable color.

They force readily and we can recommend them for that purpose; indeed, there is no finer group of Tulips for conservatory decoration at their season than these Darwins. They embrace nearly all shades of white, lilac, rose, red and crimson, while a few new and very interesting types are colored mauve, heliotrope, maroon and black purple.

Narcissus

The very beautiful species and varieties of Narcissus are among the most popular and largely grown of Spring-flowering bulbs, and that deservedly, too. Their exquisite grace, beauty and charm of habit have been immortalized in the poetry of all times. No garden should be without them.

They are all of the easiest cultivation, thriving in almost any soil and situation, and they may be left alone for several years after once being planted. They do best, however, in a deep and somewhat stiff soil, and in a partially shaded position. They are well adapted for planting by the sides of streams, or lakes, or ponds, and in mixed flower or shrubbery borders. They are also suitable for naturalizing in the grass, by the side of woodland walks or in open spaces between trees and shrubs. With the exception of the Polyanthus section, they are all perfectly hardy.

Narcissus are also very suitable for growing in pots, requiring about the same treatment as Hyacinths, with 3 or 4 bulbs in a 5-inch pot.

Polyanthus Narcissus

Beautiful, free-flowering, deliciously sweet-scented flowers, of the easiest culture; suitable for forcing or for growing in water in the same way as the Chinese Sacred Narcissus. They bear tall spikes of bloom, with from six to twenty flowers each. Bulbs planted in the open border in October and November stand the Winter with protection.

Grand Monarque. White, with pale yellow cup; very large flower. Each 10c., doz. 90c., 100 \$6.00, 1000 \$56.00.

Grand Soleil d'Or. Yellow, with orange cup; very free flowering. Each 10c., doz. \$1.00, 100 \$7.00, 1000 \$65.00.

Paper White Grandiflora. The best Narcissus for growing in water. The flowers are large, attractive in color, and intensely fragrant. Place them in a shallow dish of water, with gravel or small stones at the bottom. Fine for pot culture, and largely grown by florists for cut flowers.

Large Bulbs. Doz. 50c., 100 \$3.50, 1000 \$30.00.

Mammoth Bulbs. Each 6c., doz. 60c., 100 \$4.00, 1000 \$35.00.

Pebbles for above. Qt. 15c., 4 qts. 50c.

Narcissus, Paper White Grandiflora

CHINESE SACRED NARCISSUS

These may be grown in pots of earth, and very satisfactorily in bowls, partially filled with pebbles and water. As the roots develop, they form a network about the pebbles, thus supporting the plant when in bloom. They should be started in the dark for ten to fourteen days, and then grown in bright light, but carefully protected from drafts. The flowers are mostly white, with yellow cups and very fragrant.

Large Selected Bulbs. Each 20c., 3 for 50c., doz. \$2.00. **Extra Large Bulbs.** Each 25c., doz. \$3.00.

Glass and Earthenware Bowls

Glass Bowls. For Narcissus and Chinese Lilies. Each 25c. and 50c.

Earthenware Bowls. For growing bulbs in water. 6-inch, 50c. each; 8½-inch, 70c. each.

AMARYLLIS

(Ready in October)

A magnificent and interesting plant for pot culture, producing showy flowers that are very attractive and handsome. They should be grown in rich, sandy loam, with good drainage, and abundant moisture when growing, but at their season of rest water should be given sparingly.

Formosissima. (Jacobean Lily.) Brilliant scarlet. Each 15c., doz. \$1.50.

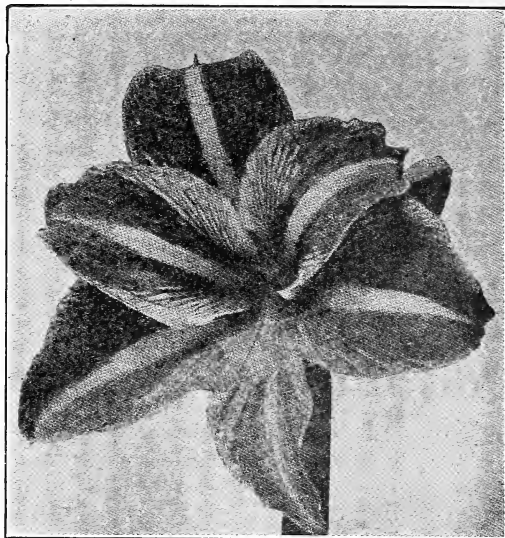

Halli. (*Lycoris squamigera*.) Bright, rosy lilac flowers, fragrant, 3 or 4 inches across, flowers in August. The foliage appears in Spring, disappears in June, and is followed two months later by the naked flowers. Each 25c., doz. \$2.50, 100 \$18.00.

Johnsoni. (Spice Lily.) Crimson, striped with white. Each 50c., doz. \$5.00.

Vittata. Hybrids mixed. Each 60c., doz. \$6.00.

Hippeastrum, Veitch's and Ker's New Hybrids.

The finest race of Amaryllis in cultivation; exceeding in the size and fine form of their flowers, as well as in the diversity of colors and markings, all former hybrids. The segments are of nearly uniform size, giving the flowers a regular trumpet form. Each \$1.25, doz. \$12.00.

Amaryllis, Vittata

CALLA LILIES

Well-known plant of easy culture; the only particular attention it requires is constant watering, and as warm a room as can be conveniently given it.

Devoniensis. The Godfrey Calla. This is the finest variety ever sent out. It gives three blooms to one of the ordinary Calla, is snow white and perfect in form; blooms on very small plants, though it attains a very large size. Each 35c., doz. \$3.50, 100 \$25.00.

Spotted Leaf. (*Richardia alba maculata*.) Dark green foliage, beautifully spotted with white. Each 10c., doz. \$1.00.

White. (*Richardia Aethiopica*.) The White Calla, or Lily of the Nile, is a well-known plant of easy culture, and in Winter is one of our best window plants. Extra large roots. Each 35c., doz. \$3.50, 100 \$25.00.

Yellow, Elliottiana. The finest yellow Calla; large, rich, deep golden flowers, often 4 to 5 inches across at the mouth; habit of growth and foliage like the old favorite White Calla, excepting the leaves of Elliottiana are spotted with white. Each 40c., doz. \$4.00, 100 \$30.00.

CROCUS

(For Pots and Borders)

The bulbs should be set 3 inches deep, and be planted in October or early in November to insure success. The Crocus can also be grown indoors, either in pots or bulb pans in loam, or in dishes filled with wet moss, in which the bulbs are set closely, half an inch below the surface.

Hybrid Named Crocus

These are composed of all the best and most beautiful varieties and are remarkable for richness of color and the immense size of their flowers.

Cloth of Gold. Golden yellow, striped brown.

David Rizzio. Dark blue.

Mixture of all Colors.

Price: Doz. 20c., 100 \$1.50, 1000 \$13.00.

FREESIA

(Ready in August)

This is one of the most beautiful of all Cape bulbs, possessing a peculiar grace of form, and its fragrance is most delightful, one pot of five or six bulbs being sufficient to perfume a whole house. As cut flowers, they are extremely valuable; the unexpanded blooms, opening in water, fill the air with the most delicate perfume, and their endurance is really remarkable.

Plant six to eight bulbs in a 5-inch pot. The tops of the bulbs should be 1 inch below the surface of the soil and care taken that the pots are well drained.

Purity. A magnificent, snowy white, of very large size and great length of stem. A truss bearing from eight to ten buds, of which six are often open at one time.

POT-GROWN STRAWBERRIES

Pot-grown Strawberry plants are much superior to the ordinary ground layers usually sold, as there is no loss of fine roots in taking them up. They can be transplanted at any season with scarcely any check to their growth. The sooner pot-grown plants can be set out after June 1st, the larger they will grow and the more they will produce the next Spring. We only offer varieties that are considered the best of existing sorts.

Those marked "P" have pistillate or imperfect flowers and must be planted near perfect-flowering kinds in order that the flower may fertilize. Varieties not so marked are perfect-flowering and can be planted alone.

Brief Directions for Culture

Strawberries require rich, well-tilled soil. The plants should be set 15 inches apart, in rows 2 feet apart. One hundred plants will plant four rows 30 feet long, if set above distance apart. For horse cultivation set plant 2 feet apart in rows 3 feet apart; 7,260 plants at this distance will plant an acre. Firm the plants well in the soil, keeping them thoroughly cultivated and cut off all runners. About the middle of December, cover bed with salt-meadow hay, straw or leaves. In April, as soon as the plants show indications of growth, push the covering away from the plants to allow them to come through. The mulching protects the plants from cold in the winter and heat in the Summer, keeping the fruit clean and prevents the growth of weeds.
